

Across our 800 open orders, find the unshipped ones over \$100: what are they worth in total, and which three regions have the most?

### Direct Tool Calling (DTC)

### Programmatic Tool Calling (PTC)

```
total, bad, by_region = 0, 0, Counter()
for oid in tools["list_orders"]():
    o = tools["get_order"](oid)
    try:
        amount = float(o["amount"])
    except (KeyError, ValueError):
        bad += 1; continue
    if o["shipped"] or amount < 100:
        continue
    c = tools["get_customer"](o["cust_id"])
    total += amount
    by_region[c["region"]] += 1
print(total, by_region.most_common(3), bad)
```

for loop
